TECHNOLOGY NAME

AEGIS-AI

Universal Adaptive Intelligence-Based Protective Architecture for Transport Platforms

EXECUTIVE OVERVIEW

AEGIS-AI is a proprietary technology asset developed by CIVITERA GovTech Inc. to address important challenges and opportunities within its target markets. The technology is designed to create measurable value through improved performance, enhanced efficiency, greater scalability, stronger resilience, and long-term operational benefits across commercial, industrial, governmental, and strategic environments.

AEGIS-AI addresses a structural gap in autonomous mobility: as transport platforms across automotive, rail, maritime, and aerospace shift from passive safety toward AI-driven protection, no unified architectural standard exists to govern that transition. AEGIS-AI provides a vendor-neutral, regulation-aware protective architecture engineered to support occupant survivability, fleet-coordinated safety, and regulatory compliance as a single integrated layer, positioning CIVITERA at the protection foundation of the multi-trillion-dollar autonomous transport economy.

CIVITERA believes AEGIS-AI represents a strategically important innovation platform with significant commercial, industrial, and licensing potential.
